THE ECO CUTTER CONCEPT

YOUR ECONOMICAL CHOICE

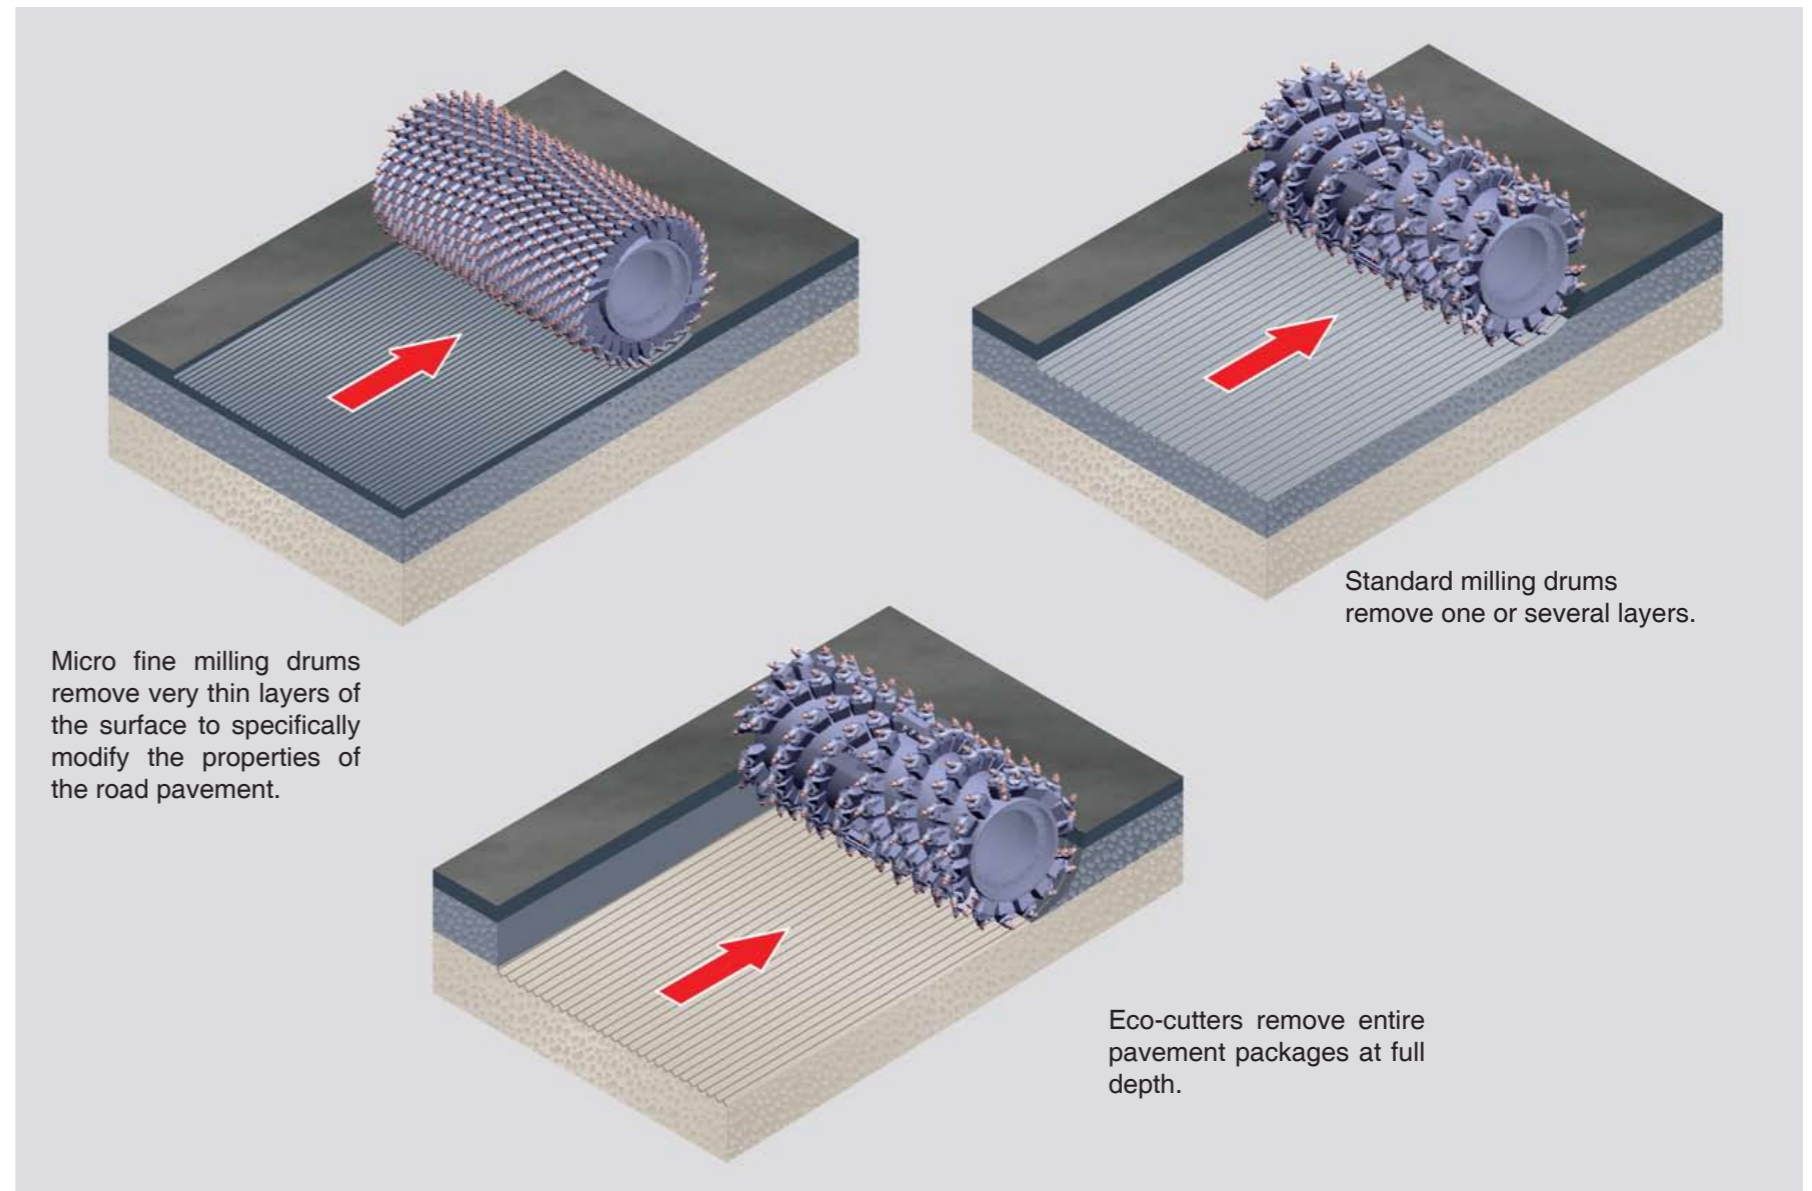

In practice, having fewer cutting tools on the milling drum of a cold milling machine means less resistance to cutting and therefore a higher rate of advance – and of course lower tool costs per milled cubic metre!

In essence, this is the basic principle of the new Eco-Cutters. These special milling drums with a smaller number of point attack tools ensure a good milling result and offer a cost efficient alternative to the customer.

The ideal tooling has been developed further in order to significantly boost the area output when milling at a certain depth. Eco-Cutters are milling drums with a reduced cutter complement which can remove the complete pavement over large areas very much more economically.

The new Eco milling drums are available for all road milling machines. They are ideal for 2 metre class models with a tool spacing of 20 to 25 mm. High milling output, combined with lower costs, makes Eco-Cutters the automatic choice for all jobs in which large areas have to be repaired.

Eco-Cutters are also convincing when milling concrete and very hard asphalt, as they achieve completely new performance levels and produce outstanding results in these areas. Eco-Cutters are basically available on request from Wirtgen for all milling machines and can be supplied at very short notice even in customized versions.
